

# **Hackathon 3 - Day 2**

## **Marketplace Technical Foundation**

### **Marketplace Technical Foundation - [Nike]**

By: Sarwat Jahan  
Roll Number: 410163

#### **Frontend Requirements:**

This document outlines the user journey flow for an e-commerce marketplace, highlighting key steps and their technical implementation. It is designed to guide the development of a robust and user-friendly platform.

#### **Flowchart overview**

Below is the detailed user journey flow for an e-commerce marketplace:

##### **Home Page:**

- The user lands on the homepage.
- The page showcases featured categories, popular products, and a search bar for easy navigation.

##### **Product Details Page:**

- The user selects a product to view its details.
- This page provides the product description, price, availability, and user reviews.

##### **Add to Cart:**

- The user adds products to the cart.
- The cart is dynamically updated with the selected quantity and total price.

##### **Checkout:**

- The user navigates to the checkout page.
- They provide a shipping address and select a delivery option.
- 

##### **Payments:**

- The user enters payment details.

- A secure payment gateway processes the transaction.

**Order Confirmation:**

- Order details are displayed on the screen and sent to the user via email.
- The order status is updated in the backend system.

**Order Confirmation:**

- The order details are displayed on the screen and emailed to the user.
- The backend system updates the order status accordingly.

**Shipment Tracking:**

- The user accesses the "Order History" section.
- Real-time shipment tracking is provided through API integration.

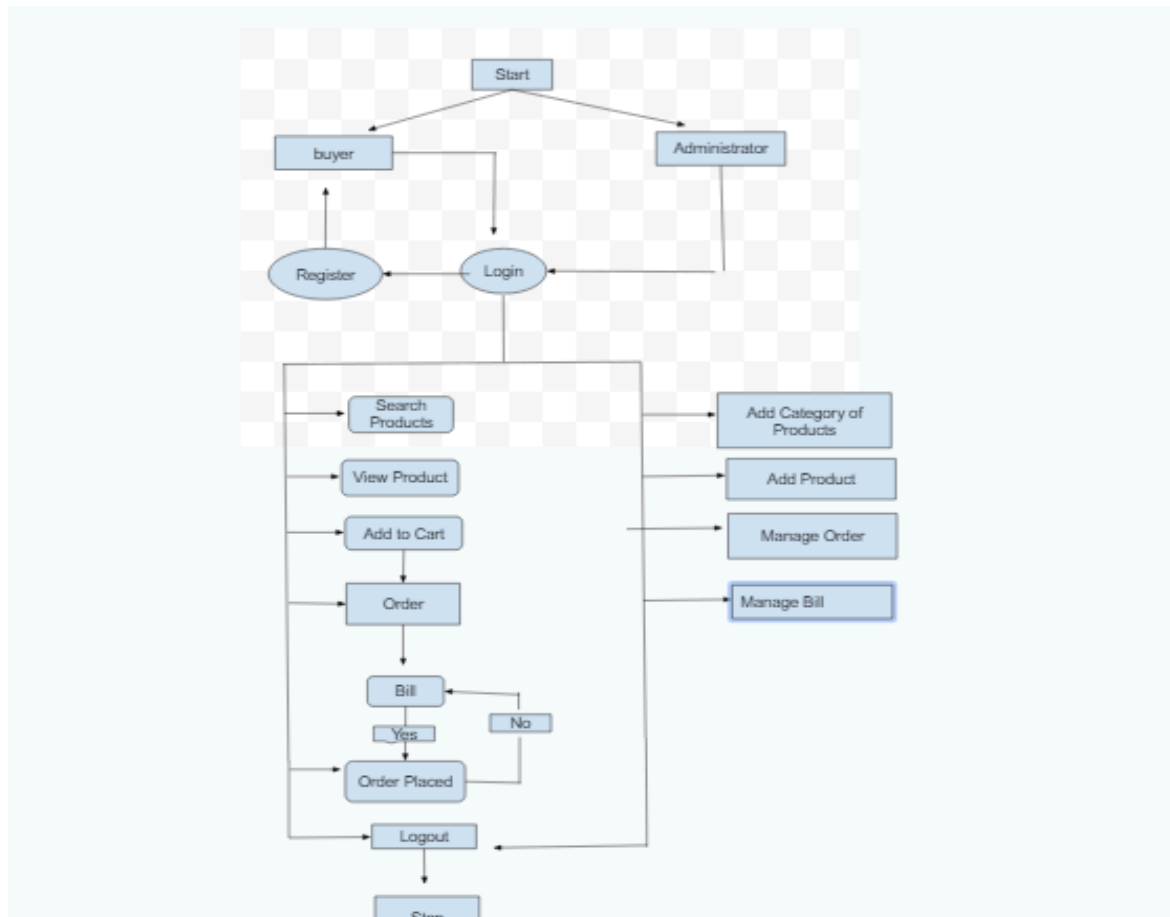

**Delivery:**

- The product is delivered to the user's specified address.

**Frontend Requirement:**

- The user will receive a notification and have the option to leave a review.
- A user-friendly interface ensures seamless browsing of products.
- The platform features a responsive design optimized for both mobile and desktop users.
- Essential Pages: Home, Product Listing, Product Details, Cart, Checkout, and Order Confirmation.

## Flowchart of Frontend:

## Design System Architecture

Frontend (Next.js)

Sanity CMS

Product Data API

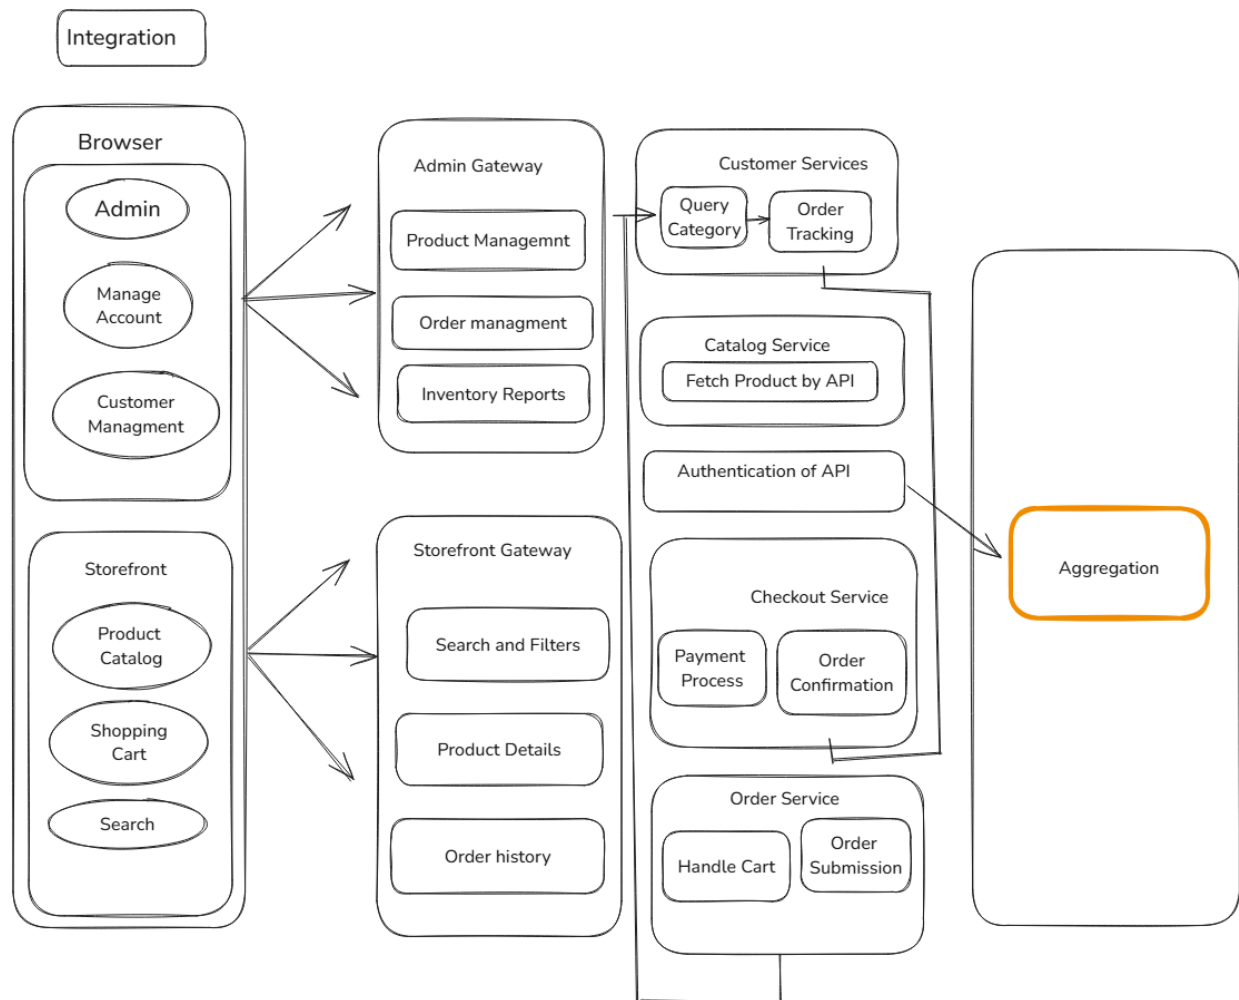

Third Party API

Shipment Tracking API

Payment Gateway

# System Architecture

## Frontend (Next.js)

### User Interface (UI):

Facilitates product browsing, cart management, and order placement.

Handles user interactions while communicating with backend services through APIs.

### Sanity CMS:

Serves as the core backend for managing product information, customer details, and order records.

Offers APIs to support data retrieval and updates for the frontend.

### Product Data API:

Provides endpoints to access product listings, detailed information, and inventory status.

**Third-Party APIs:**

Integrates external services such as shipment tracking and payment processing.

**Payment Gateway:**

Ensures secure payment processing and delivers transaction confirmations.

**API Endpoints:**

Endpoint	Method	Description	Parameters	Response Example
/api/shoes	GET	Fetch all Shoes items	None	{id:1,name:"Nike"}
/api/shoes/:id	GET	Fetch a single shoes pair	id(path)	{id: 1, name: "Nike"}
/api/shoes	POST	Update a Shoes pair	Name, price, category	{success: true,id:5}
/api/shoes:id	PUT	Delete a Shoes Pair	id(path), Name, price	{success:true }
/api/category	DELETE	Delete an item	id(path)	{success; true}
